CERTIFICATE

This is to certify that the IBM/ Industry Project work entitled “Develop Solution/Application to Regulate Private Health Care Sector” by Krish Patel (Enrolment No. 21162171023), Aakarsh Vyas (Enrolment No. 21162121038) and Yash Sathwara (Enrolment No. 22162122009) of Ganpat University, towards the partial fulfillment of requirements of the degree of Bachelor of Technology – Computer Science and Engineering, carried out by them in the CSE(BDA/CS) Department. The results/findings contained in this Project have not been submitted in part or full to any other University / Institute for award of any other Degree/Diploma.

ACKNOWLEDGEMENT

Industry Internship project is a golden opportunity for learning and self-development. I consider myself very lucky and honored to have so many wonderful people lead me through in completion of this project. First and foremost, I would like to thank Dr. Rohit Patel, Principal, ICT, and Prof. Dharmesh Darji, Head, ICT who gave us an opportunity to undertake this project. My grateful thanks to Prof. Ravindra Patel for their guidance in project - A Solution to Healthcare, who despite being extraordinarily busy with academics, took time out to hear, guide and keep us on the correct path. We do not know where would have been without his help. CSE department monitored our progress and arranged all facilities to make the process easier. We choose this moment to acknowledge their contribution gratefully.

KRISH PATEL (Enrollment No: 21162171023)

AAKARSH VYAS (Enrollment No: 21162121038)

YASH SATHWARA (Enrollment No: 22162122009)

ABSTRACT

The private healthcare sector plays a crucial role in providing medical services, but challenges like lack of transparency, uneven service distribution, and difficulty in finding the right healthcare facility still exist. This project aims to develop a web-based solution that helps patients find hospitals based on their medical needs, check doctor and bed availability, and make informed healthcare decisions. Using React for the frontend and Django with MongoDB for the backend, the system enables users to search for hospitals based on disease specialization, ensuring they receive timely and appropriate care. Additionally, the project integrates AI-driven forecasting to predict future patient admissions, helping hospitals manage resources effectively. The solution not only streamlines hospital selection and booking but also improves healthcare accessibility, making the private healthcare system more efficient, transparent, and user-friendly.

INTRODUCTION

Access to quality healthcare is essential, yet many patients struggle to find the right hospital or doctor when they need urgent medical attention. The private healthcare sector, while offering advanced medical facilities, often lacks a streamlined system for hospital discovery, doctor availability, and resource management. Patients frequently face challenges in identifying which hospital specializes in treating their condition and whether necessary resources like beds are available.

This project addresses these challenges by developing a web-based platform that simplifies the hospital search process. Using React for the frontend and Django with MongoDB for the backend, the application allows users to find hospitals based on their disease, check doctor availability, and make informed decisions. Additionally, AI-based forecasting helps hospitals predict patient inflow, enabling better resource management.

By integrating modern technology, this solution enhances transparency, accessibility, and efficiency in private healthcare, making it easier for patients to receive timely and appropriate care.

PROJECT SCOPE

This project aims to streamline the private healthcare sector by providing a web-based platform that connects patients with hospitals efficiently. The scope includes:

Hospital Discovery & Disease-Based Search

Patients can search for hospitals based on the disease they need treatment for. Each hospital's specialization and available treatments are listed to help patients make informed choices.

Doctor & Bed Availability Tracking

The system provides real-time information on doctor availability for specific diseases. Patients can check bed availability before visiting a hospital, reducing last-minute inconvenience.

User-Friendly Booking System

Patients can book appointments with doctors through the platform. The system ensures smooth scheduling and reduces waiting times.

AI-Powered Patient Forecasting

The platform utilizes Artificial Neural Networks (ANN) to predict future patient admissions. Helps hospitals manage resources efficiently based on demand trends.

Admin & Hospital Management Features

Hospitals can update their availability status, ensuring up-to-date information. Admin functionalities allow regulation and monitoring of private healthcare services.

Secure & Scalable Architecture

Built using React for the frontend and Django with MongoDB for the backend, ensuring scalability. Secure authentication and data handling to protect user privacy.

SOFTWARE & HARDWARE REQUIREMENTS

Software Requirements:

Web Browser: Google Chrome (recommended), Mozilla Firefox, Microsoft Edge, Safari (latest version).

Operating System: Windows 10+, macOS Mojave+, Linux (Ubuntu 20.04+).

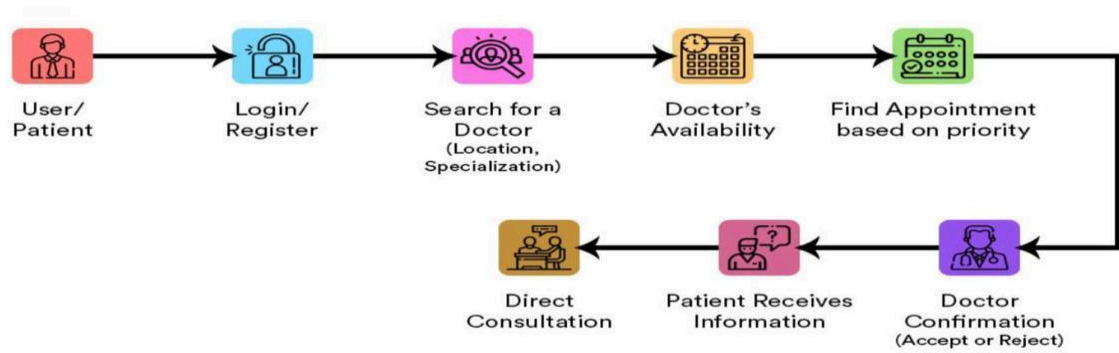

Internet Connection: Stable connection (min. 3Mbps) for smooth browsing and transactions.

Hardware Requirements:

PC/Laptop: Intel Core i3+, 4GB RAM+, 10GB free storage.

Mobile Devices: Android 6.0+ or iOS 12+, with a stable internet connection

PROCESS MODEL:

IMPLEMENTATION DETAILS

Frontend Implementation

1. Develop Pages:

- o Home Page: Add a simple layout with key details about healthcare platforms and featured hospitals.
- o Login/Register: Build forms with basic validation (e.g., valid email, password).
- o User's Page: Show a list of hospitals, allow filtering and searching.
- o Find Specialists : Show Doctors based on your requirement.
- o About Page: Show About our website.
- o Dashboard: analyze based on data.

2. Integrate APIs:

- o Fetch user data from the backend (using Axios).
- o Display the data on the User(patient's) page, handling loading and error states.
- o Create one API for Doctors creating and Recommendation.

3. UI/UX:

- o Make sure the design looks good on both mobile and desktop.
- o Add some cool features like hover effects, smooth transitions, and easy-to-navigate forms.

Backend Implementation

1. Set Up the Server: o Used Django.

- o Set up the database (MongoDB) and connect it to the backend.

2. User Authentication:

- o Implement login and registration.
- o Encrypt passwords and protect routes that need authentication (future implementation).

3. API for User(patient) & Hospitals:

- o Build APIs to create, fetch, update, and delete.
- o Add search and filter functionality to help users find specific hospital.

4. Connect Frontend and Backend:

- o Ensure the frontend can communicate with the backend (fetch data, post forms, etc.).

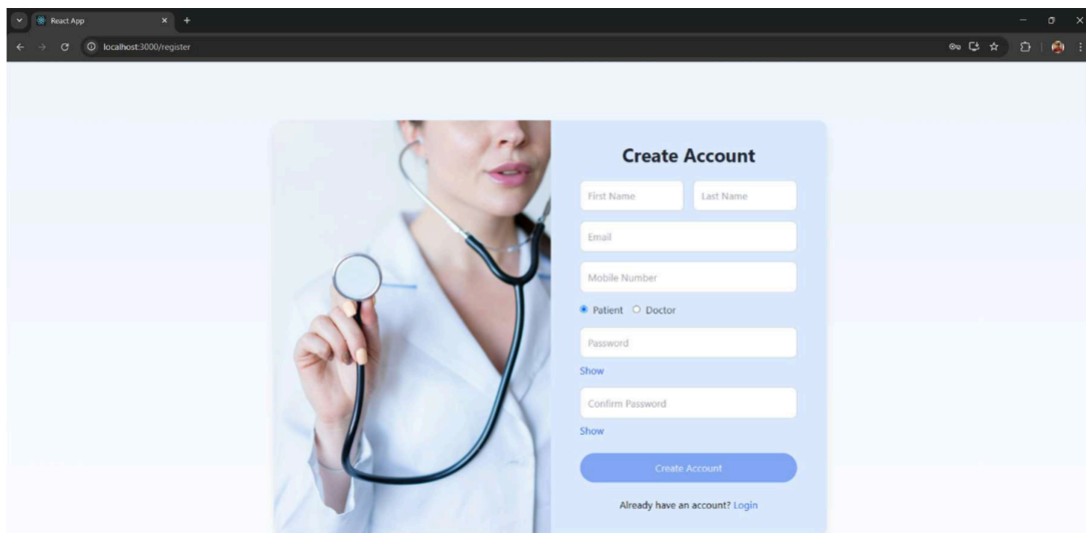

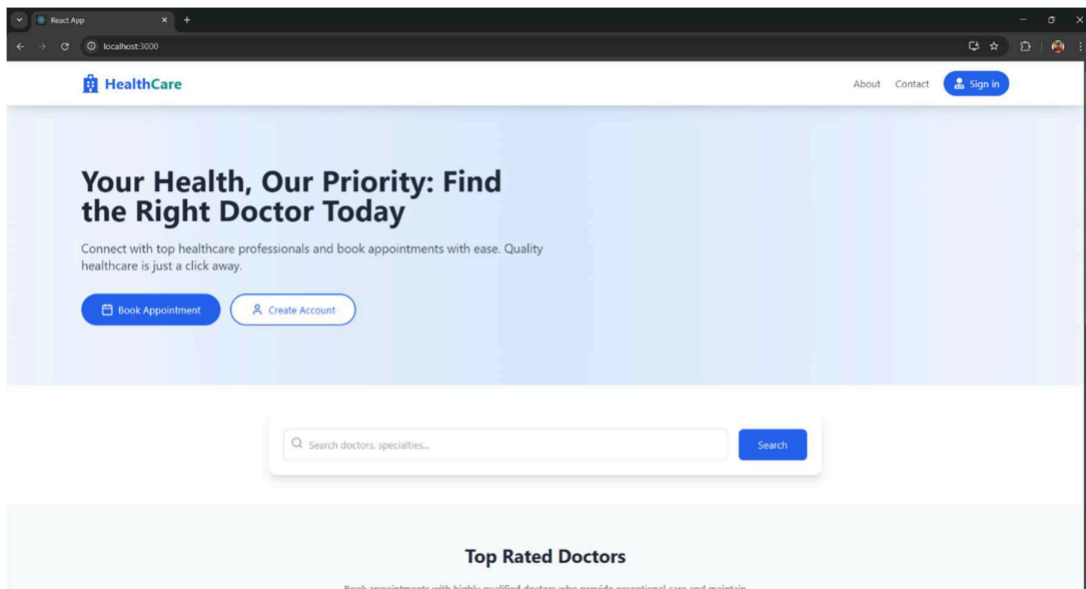

Machine Learning Part:

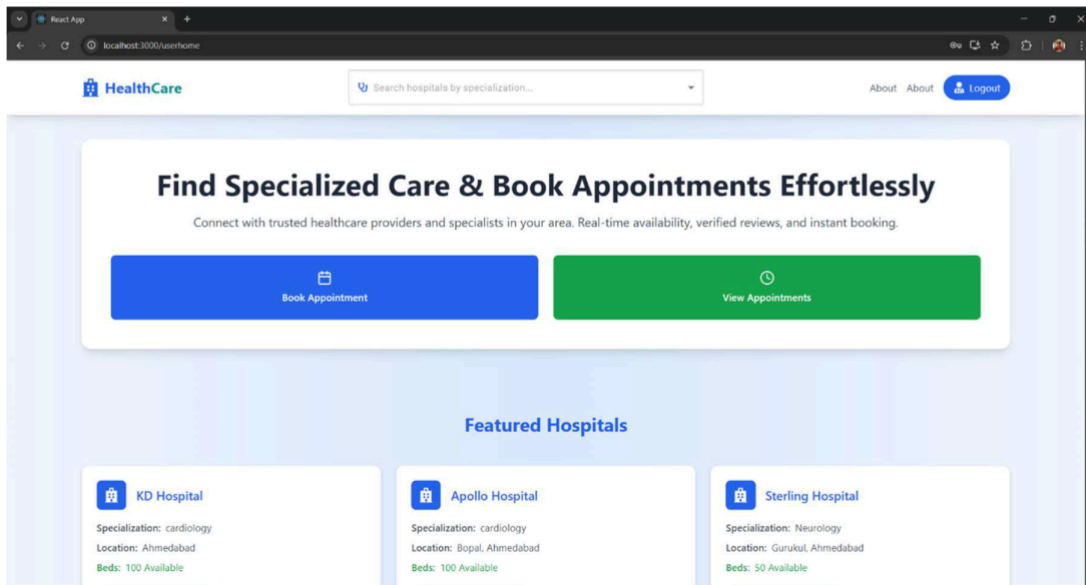

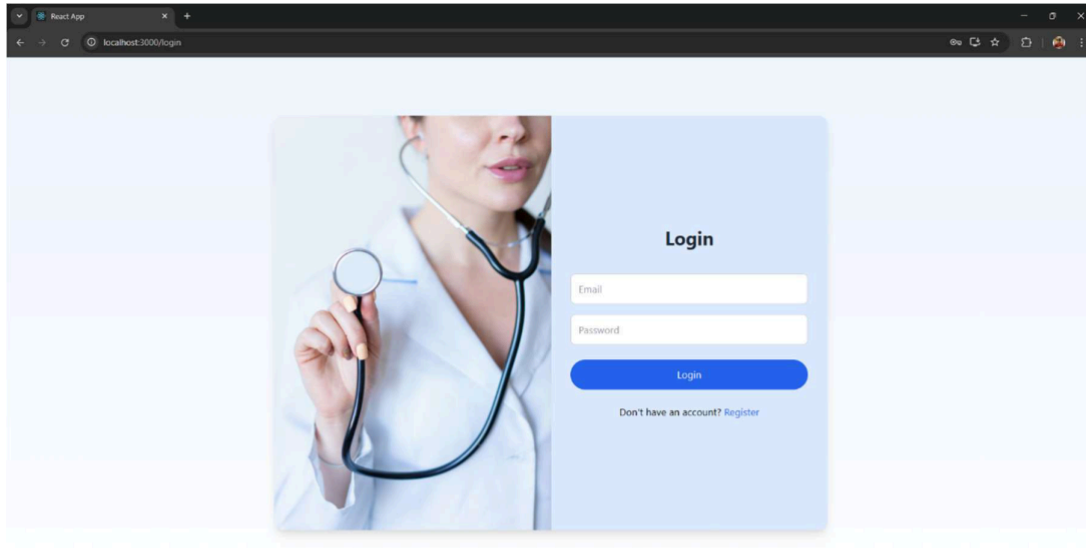

1. Developed a Recurrent Neural Network (RNN)-based recommendation system to enhance personalized suggestions by leveraging sequential user interaction data.
2. Designed and implemented a regression model to accurately predict the number of hospital beds required, utilizing historical data and relevant predictive features for improved resource planning.
3. Designed and implemented a KNN model for accurately recommended doctors.

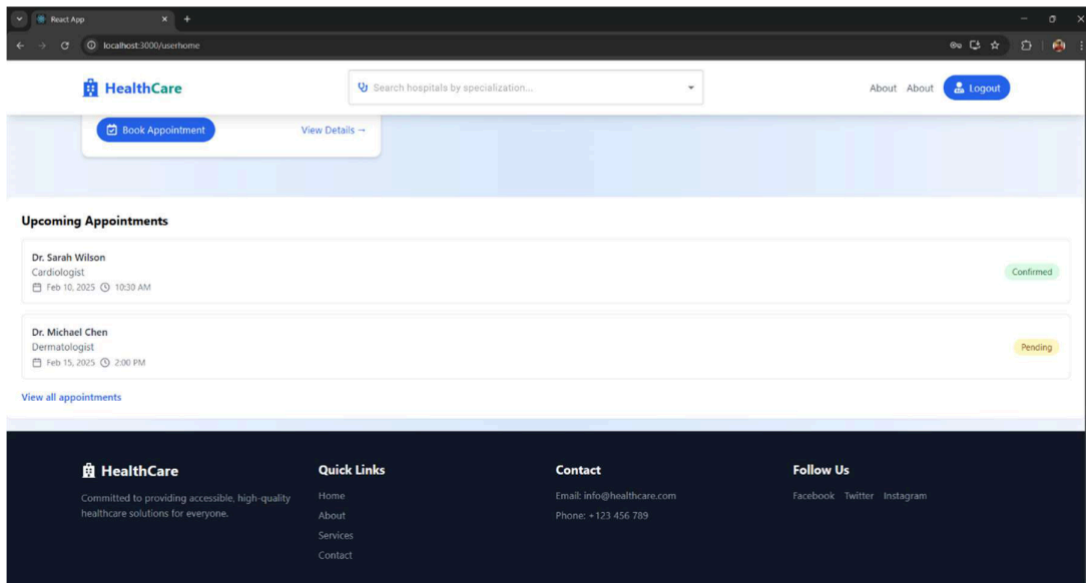

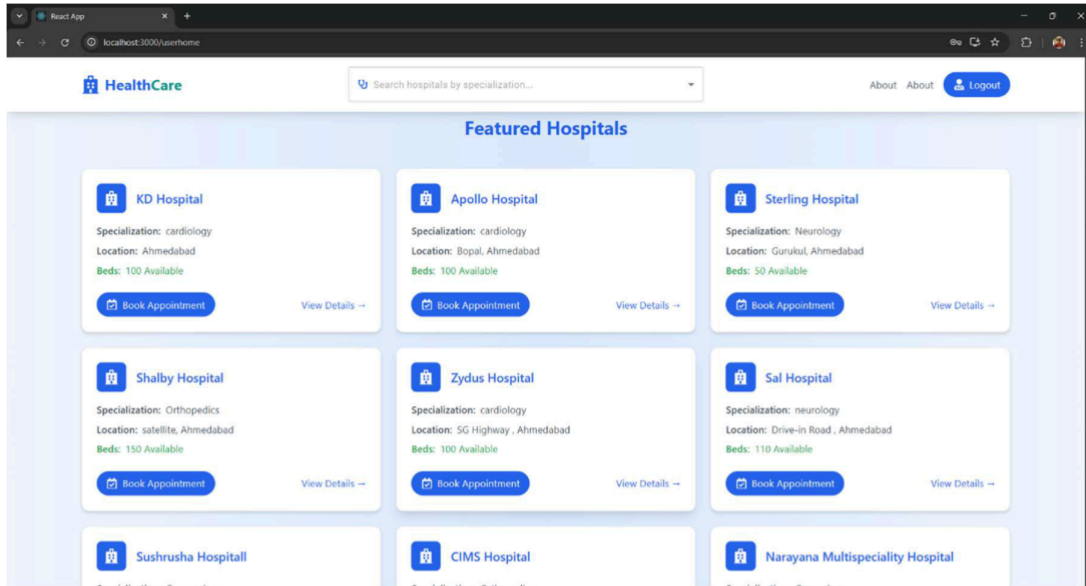

Deployment (future implementation)

1. Frontend:
 - o Build and deploy the React app on platforms like Heroku, Netlify, or Vercel.
 - o Make sure everything works smoothly on the live site.
2. Backend:
 - o Set up the backend on Heroku or AWS.
 - o Connect the live backend to the frontend and make sure everything is synced.
3. Final Testing:
 - o Test the app thoroughly (check on different devices, fix bugs, and ensure everything works).

CONCLUSION & FUTURE WORK

In conclusion, our project presents a tech-driven solution aimed at effectively regulating private healthcare.

By ensuring transparency in medical services, enhancing compliance with health regulations, and strengthening patient data security and accessibility, our system fosters a more reliable healthcare ecosystem. Additionally, the platform enables seamless online appointment booking and intelligent doctor/hospital recommendations, ultimately improving healthcare accessibility and efficiency for patients and providers alike.

Future Work:

Improving Security, Integrating the Machine Learning Part
